PATHOLOGY REPORT

Clinical Information.	Suspected peritoneal carcinomatosis. History of excision of uterine and ovarian tumor with recurrent ascitis.
Nature of specimen.	Ascitic fluid for cytology

GROSS:

One smear was prepared and stained from submitted 30 ml brownish fluid.

MICROSCOPIC:

Smears is hemorrhagic and show many small and large tight clusters of large atypical cells with hyperchromatic nuclei. Some of these clusters showing focal glandular formations and exhibit moderate anaplasia. Background shows a moderate number of mature small lymphocytes and neutrophils with some reactive mesothelial cells.

DIAGNOSIS:

Ascitic fluid, cytology:

- Positive for malignant tumor cells, consistent with metastatic adenocarcinoma of primary Mullerian origin.
- (Category V according to The International System for Reporting Serous Fluid Cytology, ISRSFC).
