## PATHOLOGY REPORT

<b>Clinical Information.</b>	Vaginal (skene gland) cyst.
<b>Nature of specimen.</b>	Cystectomy

### GROSS:

Cyst wall partialy covered by skin measured 6.8c4.5x2.8 cm, totally embedded.

### MICROSCOPIC:

A unilocular cystic structure embedded within a fibromuscular stroma. The cyst is lined by benign, non-keratinizing stratified squamous epithelium, consistent with the lining of the distal paraurethral ducts, showing orderly maturation with a distinct basal layer and no evidence of cytologic atypia or dysplasia. The underlying cyst wall consists of dense fibrovascular connective tissue admixed with smooth muscle bundles and exhibits a mild, chronic lymphoplasmacytic inflammatory infiltrate.

### DIAGNOSIS:

#### Vaginal cystectomy:

- Benign paraurethral (Skene's) duct cyst, Inflamed.
- Negative for malignancy.
