PATHOLOGY REPORT

Clinical Information.	Panhysterectomy.
Nature of specimen.	Panhysterectomy.

GROSS:

Panhysterectomy specimen; the uterus measured 6.8x5.5x4.5 cm with a myometrial thickness of 2.3 cm and an endometrial thickness of 0.6 cm, with fairly defined endometrial soft to rubbery mass measuring 4.5x1.3x1.3 cm. The cervix is 1.5 cm long. Rt and Lt ovaries measured 3.5x3x2 cm and 4x3x2.3 cm, respectively; both were grossly unremarkable. Right and Left Fallopian tubes measured 5.5 cm and 6 cm, both were grossly unremarkable.

MICROSCOPIC:

- Specimen type: Panhysterectomy.
- Tumor site (anatomic): Endometrium (with cervical stromal involvement).
- Tumor size — largest dimension: 4.5 cm.
- Histologic type: Endometrioid adenocarcinoma.
- Grade (FIGO/WHO): Grade 1 (low grade).
- Depth of myometrial invasion: >1/2
- Cervical stromal involvement: Present — tumor invades cervical stroma. (documented on microscopic sections).
- Lymphovascular invasion (LVSI): Absent (no LVSI identified).
- Parametrial involvement: Absent.
- Ovarian/adnexal involvement: Absent.
- Peritoneal cytology: Not provided.
- Lymph nodes (number examined / number positive): Not provided.
- Surgical margins: Closest margin — endocervical margin; reported as "close" (0.2 mm).
- Pathologic staging: pT2NXMx (AJCC 8th edition); FIGO Stage II.

DIAGNOSIS:

Panhysterectomy:
- **Endometrial Endometrioid adenocarcinoma, grade 1. Close margin.**
- **Stage: pT2NXMx (AJCC 8th edition); FIGO Stage II.**
