

Pt. Name:	نوره محمد ناجي حيدر		Lab Number:	0665-2026	
Pt. Age:	42 years.	Gender:	Female	Received date:	2026-02-01
Referred By:	د/ أنيس الجحيري		Reported date:	2026-02-09	

PATHOLOGY REPORT

Clinical Information.	Right breast mass.
Nature of specimen.	Right modified radical mastectomy.

GROSS:

Fibrofatty tissue measured 30x16x8 cm, covered by a skin ellipse of 27x16 cm, with unremarkable nipple and areola. Attached axillary tail measured 8x7x4 cm. Serial sectioning revealed fairly defined, firm, greyish-white tumor mass measured 7x5x3 cm, located 3 cm from the skin. Surgical clearances are 4.5 cm, 6.5 cm, 7 cm, 8 cm and 1.5 cm from the superior, inferior, medial, lateral and deep margins, respectively. Dissected axillary lymph nodes are variable sized largest is 2.3 cm.

MICROSCOPIC:

- **Procedure:** Right Radical mastectomy.
- **Tumor site:** mid-upper aspect.
- **Tumor size (greatest dimension in mm):** 70 mm.
- **Histologic type:** Invasive carcinoma (NST).
- **Histologic grade:** grade 2.
- **Extension to skin:** None, nipple and areola are free of tumor and Paget cells.
- **Chest wall (pectoral muscle) involvement:** No.
- **Margin status (distance in mm):** 45 mm, 65 mm, 70 mm, 80 mm and 15 mm from superior, inferior, medial, lateral and deep margins, respectively.
- **Lymphovascular invasion:** Present.
- **Perineural invasion:** present.
- **Multifocality / multicentricity (number of foci and dimensions):** Unifocal, 7 x 5 x 3 cm.
- **Presence/extent of DCIS (if concurrent)—grade and extent:** minor, intermediate grade with comedo necrosis.
- **Number of lymph nodes examined (total):** 25 Lymph Nodes.
- **Number positive for metastasis:** 22 Lymph Nodes.
- **Greatest dimension of lymph nodes:** 23 mm.
- **Extra-nodal / extracapsular extension (present/absent):** Present.
- **Pathologic stage:** pT3N3Mx.

DIAGNOSIS:

Right modified radical mastectomy:

- Invasive carcinoma (NST), grade 2.
- Stage: pT3N3Mx.
- Margins are negative.
- Lymph nodes are (22/25) positive for metastasis.
