PATHOLOGY REPORT

Clinical Information.	Pedunculated mass of gingiva of lower jaw.
Nature of specimen.	Excision biopsy

GROSS:

One soft tissue fragment measured 1.7x1.3x0.8 cm, totally embedded.

MICROSCOPIC:

Polypoid lesion covered by focally ulcerated squamous epithelium. Core is fibrotic showing marked vascular endothelial proliferation with dense infiltration by small lymphocytes and plasma cells. No evidence of specific granulomas. No evidence of atypia or malignancy.

DIAGNOSIS:

Pedunculated mass of gingiva, excision biopsy:

- Inflammatory epulis
- Negative for malignancy.
