## PATHOLOGY REPORT

Clinical Information.	Acute cholecystitis.
Nature of specimen.	Cholecystectomy.

### GROSS:

Gall bladder measured 7x2.5 cm, showing ulcerated mucosa and thickened wall up to 0.4 cm. The specimen was totally submitted.

### MICROSCOPIC:

Gall bladder tissue sections showing extensively ulcerated mucosa with related marked dense infiltration by mature lymphocytes admixed with plasma cells, macrophages and many neutrophils with formation of numerous microabscesses. Such dense infiltration is extending to peri-cholecystic fat with related vascular congestion and interstitial hemorrhage with fibrosis. No evidence of specific granulomas. No evidence of malignancy.

### DIAGNOSIS:

#### Cholecystectomy:

- Acute on top of chronic cholecystitis.
- Negative for malignancy.

### Pathologist

Prof. Dr. Neveen Tahoun, MD, PhD
