PATHOLOGY REPORT

Clinical Information.	Irregular vaginal spotting with post coital bleeding.
Nature of specimen.	Pap smear for cytology examination.

GROSS:

Two smears were submitted, labeled as ectocervix and endocervix, both were stained with pap.

MICROSCOPIC:

Smears shows unremarkable squamous cells, satisfactory for evaluation with present endocervical / transformation zone components. There is associated mild inflammatory changes without identified clue cells. Monilia spore and hyphae are identified. No evidence of viral or trichomonal infection. No evidence of atypical or malignant cells.

DIAGNOSIS:

Pap smear, conventional cytology:

- Satisfactory for evaluation.
- Negative for intraepithelial lesion or malignancy (NILM).
- Organisms: Moniliasis.
- Mild neutrophilic infiltrate.
- Clue cells are not identified.
