PATHOLOGY REPORT

Clinical Information.	Nodular gastric mucosa.
Nature of specimen.	Endoscopic biopsy.

GROSS:

Soft tissue fragments collectively measured 1.2 cm.

MICROSCOPIC:

Gastric mucosa showing moderate infiltration by lymphocytes and plasma cells. Lymphocytes aggregate in some foci to form lymphoid follicles with active germinal centers. Neutrophils are seen infiltrating glands thus indicating activity. H. pylori characteristic forms are present. There is no evidence of intestinal metaplasia, atypia or malignancy.

DIAGNOSIS:

Stomach, endoscopic biopsy:

- H. pylori associated moderate chronic follicular gastritis with moderate inflammatory activity.
- Negative for intestinal metaplasia, dysplasia or malignancy

Pathologist

Prof. Dr. Neveen Tahoun, MD, PhD
