PATHOLOGY REPORT

| | |
|------------------------------|---------------------------------------|
| Clinical Information. | Righ maxillary locally advanced mass. |
| Nature of specimen. | Core needle biopsy. |

GROSS:

Tissue cores 0.3 to 1.3 cm, totally embedded.

MICROSCOPIC:

Submitted core biopsy showing dense inflammatory infiltrate rich in multinucleate giant cells of the foreign body type and foamy macrophages. The former show engulfed spheroidal organisms 2-4 microns with clear capsule and faint rounded nucleus, consistent with cryptococcosis. No evidence of malignancy.

DIAGNOSIS:

Rt. Maxillary mass, core biopsy:

- Fungal granulomatous inflammation (cryptococcosis).
- Confirmatory correlation with microbiological studies is recommended.
