## PATHOLOGY REPORT

<b>Clinical Information.</b>	Adenomyosis
<b>Nature of specimen.</b>	Panhysterectomy

### GROSS:

Panhysterectomy specimen; uterus measures 10x6.5x5 cm with trabeculated myometrium having thickness of 2.5 cm showing and endometrial thickness of 0.5 cm. Cervix is 3 cm, long. The Rt. And Lt. ovaries measured 1.8x1.3x1 cm and 2x1.5x1 cm. The left ovary showed unilocular cyst measured 1.5x1 cm, filled with gelatinous fluid. The right and left fallopian tubes measured 5 cm and 6 cm, and are grossly unremarkable

### MICROSCOPIC:

Endometrium shows hyperplastic endometrial glands, is non-secretory, it is formed of slightly branched glands lined by 1-2 layers of cells. Stroma is cellular. No evidence of complex glandular pattern. Some of the hyperplastic endometrium are seen embedded within deep myometrium. Cervix shows Nabothian cysts with mild endocervicitis and squamous metaplasia. Both ovaries shows cystic follicles and corpora albicans. Fallopian tubes are unremarkable. No evidence of atypia or malignancy.

### DIAGNOSIS:

#### Panhysterectomy:

- Mild simple endometrial hyperplasia without atypia
- Deep adenomyosis
- Cervical Nabothian cysts and mild endocervicitis and squamous metaplasia.
- Ovarian cystic follicle and corpora albicans.
- Fallopian tubes are unremarkable.
- Negative for malignancy.
