PATHOLOGY REPORT

Clinical Information.	Dysfunctional uterine bleeding
Nature of specimen.	Panhysterectomy

GROSS:

Panhysterectomy specimen showing: uterus 10x6.5x4.5 cm with 2.3 cm thick wall. Endometrial thickness is 0.6 cm. Cervix is 3 cm long. Rt and Lt ovaries measured 2x1.5x1 cm, each, grossly unremarkable. Rt and Lt Fallopian tubes are 6 cm and 5 cm, respectively, both are grossly unremarkable.

MICROSCOPIC:

Endometrium is non-secretory and hyperplastic, it is formed of slightly branching glands and lining by 2-3 layers of cells amid cellular stroma. No evidence of complex glandular pattern, atypia or malignancy. Some of these hyperplastic endometrial glands are seen embedded within superficial myometrium. Cervix show Nabothian cysts, mild endocervicitis and squamous metaplasia. Both ovaries show corpora albicans and cystic follicles. Fallopian tubes are unremarkable.

DIAGNOSIS:

Panhysterectomy:

- Moderate simple endometrial hyperplasia, negative for atypia.
- Superficial adenomyosis.
- Nabothian cysts with mild non specific endocervicitis and squamous metaplasia.
- Ovarian corpora albicans and cystic follicles.
- Unremarkable Fallopian tubes.
- No evidence of malignancy.
