PATHOLOGY REPORT

Clinical Information.	Lt testicular torsion 2 months ago resulting in testicular necrosis.
Nature of specimen.	Lt orchiectomy

GROSS:

Left orchiectomy specimen measuring 6 x 2.5 x 2 cm with an attached spermatic cord measuring 3.3 x 1 cm, which upon sectioning reveals a testis measuring 1.5 x 1 cm. Additionally received are five separate pieces of soft tissue measuring 2.5 x 2 x 1 cm in aggregate.

MICROSCOPIC:

Sections show massive and complete ischemic necrosis of testicular parenchymatous tissue. There is moderate fibrosis of the tunica with related interstitial hemorrhage and many congested and blood vessels. No evidence of specific granulomas. No evidence of atypia or malignancy.

DIAGNOSIS:

Left Orchiectomy:

- Hemorrhagic infarction (neglected torsion).
- Negative for malignancy.
