PATHOLOGY REPORT

Clinical Information.	Congestion and hyperemia of the gastric mucosa with granular antral mucosa with evident bile reflux.
Nature of specimen.	Endoscopic biopsy.

GROSS:

Soft tissue fragments collectively measured 0.6 cm, totally embedded.

MICROSCOPIC:

Gastric mucosa antral type showing moderate atrophy of glands and moderate infiltration by lymphocytes and plasma cells. Some neutrophils are seen infiltrating glands thus indicating activity. H. pylori characteristic forms are seen colonizing glands. No evidence of intestinal metaplasia, atypia or malignancy.

DIAGNOSIS:

Stomach, Endoscopic biopsy:

- H. pylori-associated moderate chronic atrophic gastritis with associated minimal activity.
- Negative for dysplasia or malignancy.
