PATHOLOGY REPORT

Clinical Information.	Panhysterectomy.
Nature of specimen.	Panhysterectomy.

GROSS:

Panhysterectomy specimen; uterus measures 8.5x7x5 cm with trabeculated myometrium having thickness of 2.5 cm showing fibroid mass 0.6x0.5cm, and endometrial thickness of 0.7 cm, showing endometrial polypoid mass 4.2x1.5x1 cm, away 2.7 cm from endocervix. Cervix is 3 cm, long. The Rt. And Lt. ovaries measured 2.3x1.7x1 cm and 2x1.5x1 cm. The Rt. ovary showed unilocular cyst measured 1.5x1. 2 cm. The right and left fallopian tubes measured 5 cm, each, and are grossly unremarkable.

MICROSCOPIC:

Specimen: Panhysterectomy.

Histopathologic diagnosis: Endometrioid adenocarcinoma, grade 1.

Tumor size: 4.2x1.5x1 cm.

Lymphovascular invasion: Not identified.

Perineural invasion: Not identified.

Associated features:

- Adenomatous (complex) endometrial hyperplasia in rest of endometrium.
- Cervix shows Nabothian cysts with mild endocervicitis.
- Both ovaries shows cystic follicles and corpora albicans.

Margins: Lower cervical and parametrial are free.

Stage: pT1b.

DIAGNOSIS:

Panhysterectomy:

- Endometrioid adenocarcinoma, grade 1 complicating pre-existing adenomatous (complex) endometrial hyperplasia. Margins of excision are free.
